

# CMenu plugin V1.2

How to use:

(With the following steps, you can easily create a multilingual website.)

## Step 1:

Create all the pages you want in each language.

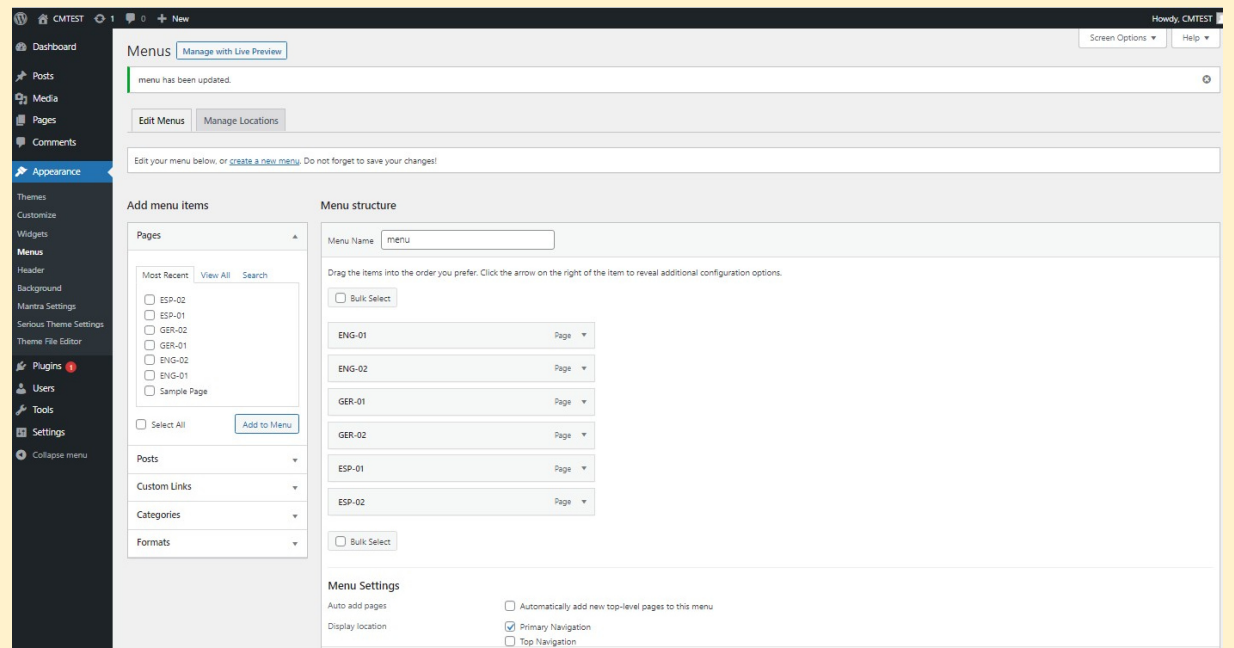

The screenshot shows the WordPress dashboard with the 'Pages' section selected. The page title is 'Pages' and it shows 8 items. The table lists the following pages:

Title	Author	Date
ENG-01	CMTEST	Published 2023/08/08 at 11:04 am
ENG-02	CMTEST	Published 2023/08/08 at 11:05 am
ESP-01	CMTEST	Published 2023/08/08 at 11:05 am
ESP-02	CMTEST	Published 2023/08/08 at 11:06 am
GER-01	CMTEST	Published 2023/08/08 at 11:05 am
GER-02	CMTEST	Published 2023/08/08 at 11:05 am

## Step 2:

Create a main menu if it doesn't exist yet

The screenshot shows the WordPress dashboard with the 'Menus' section selected. The page title is 'Menus' and it shows a message 'Menu has been updated.' The 'Menu Name' is 'menu'. The 'Add menu items' section shows a list of pages to be added to the menu. The 'Menu structure' section shows the menu items in the following order:

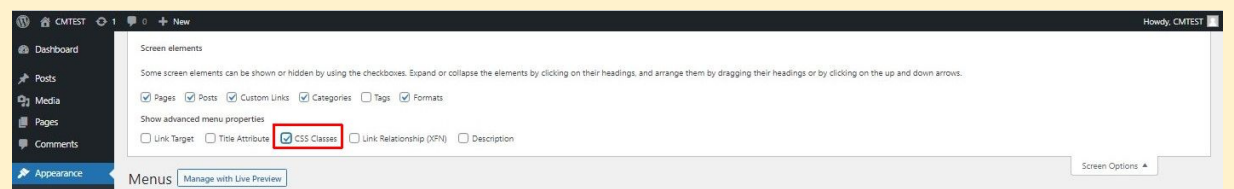

- ENG-01 Page
- ENG-02 Page
- GER-01 Page
- GER-02 Page
- ESP-01 Page
- ESP-02 Page

The 'Menu Settings' section shows the following options:

- Auto add pages:  Automatically add new top-level pages to this menu
- Display location:  Primary Navigation,  Top Navigation

## Step 3:

Enable the CSS settings in the menu.

The screenshot shows the WordPress dashboard with the 'Menus' section selected. The page title is 'Menus' and it shows a message 'Menu has been updated.' The 'Screen elements' section shows the following options:

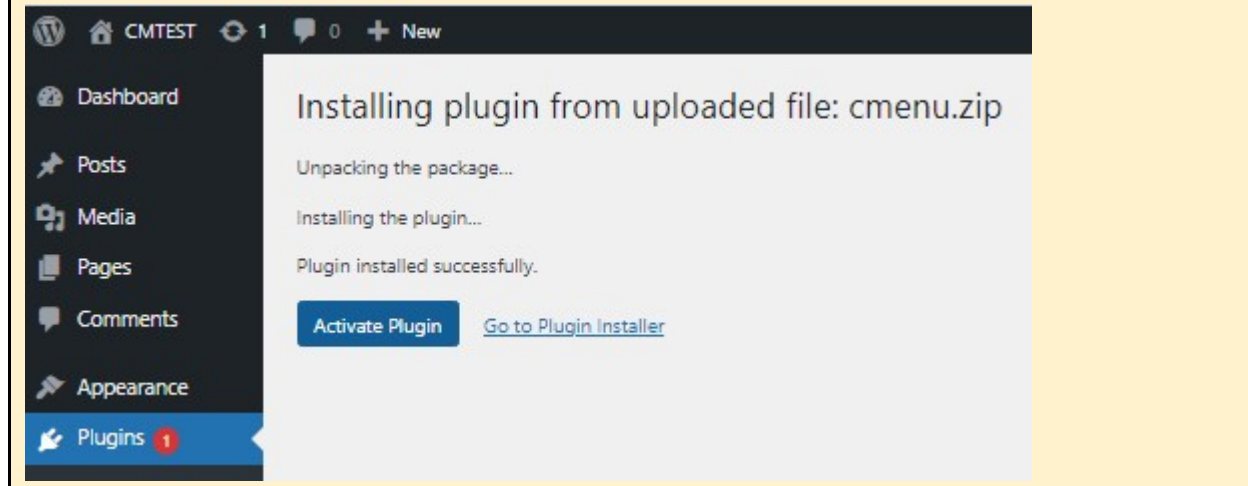

- Pages:
- Posts:
- Custom Links:
- Categories:
- Tags:
- Formats:

The 'Show advanced menu properties' section shows the following options:

- Link Target:
- Title Attribute:
- CSS Classes:
- Link Relationship (XFN):
- Description:

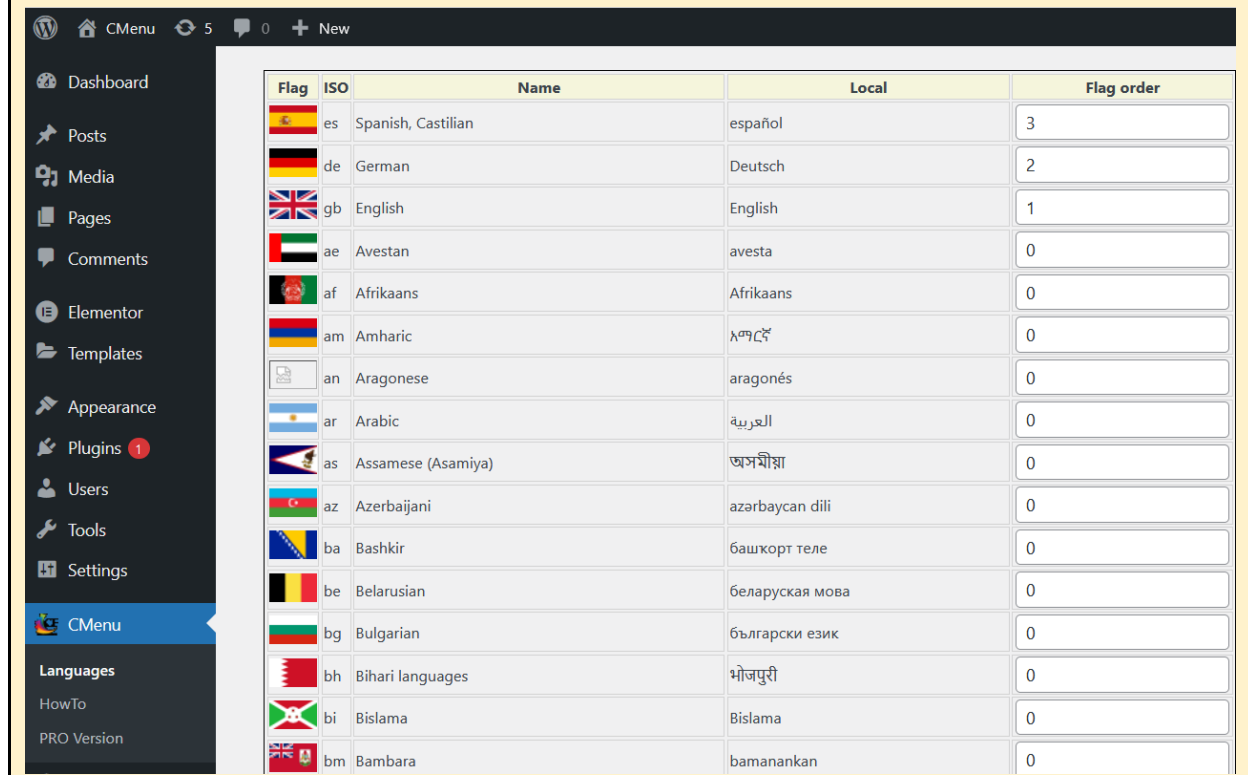

#### Step 4:

Install and enable the CMENU plugin

#### Step 5:

In CMENU, select the languages you want to use. The chosen languages will jump to the top of the list. Where the "flag\_order" is 0, those flags will not be visible.

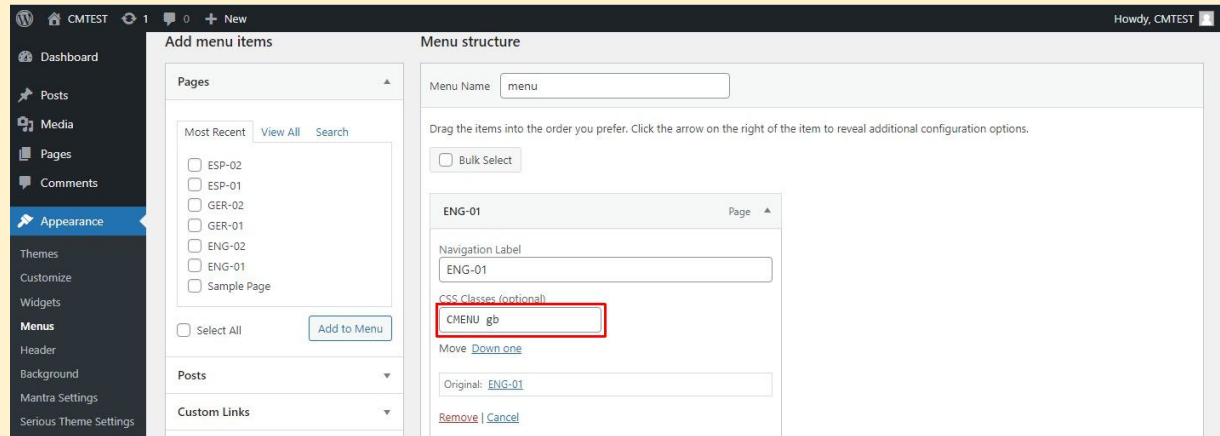

#### Step 6:

The changes are not yet visible on the finished page.

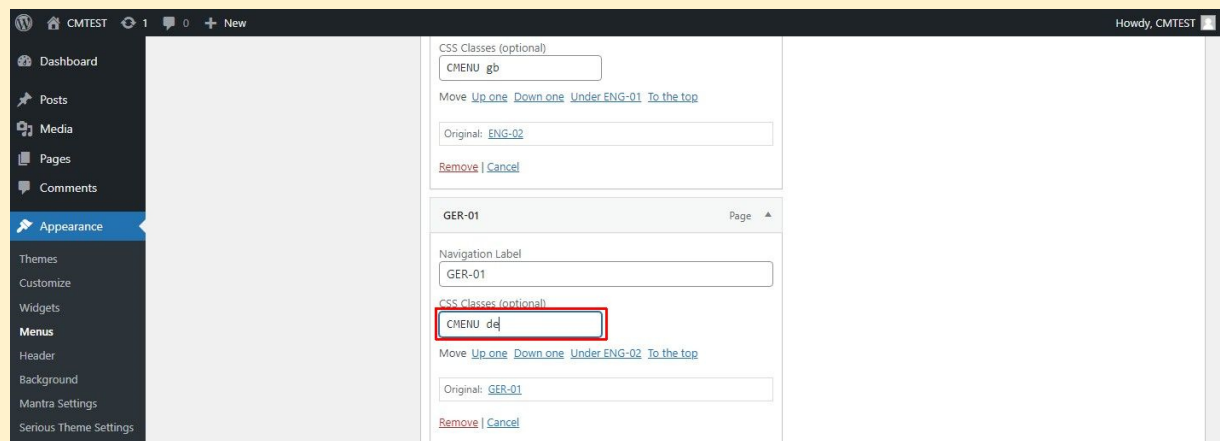

## Step 7:

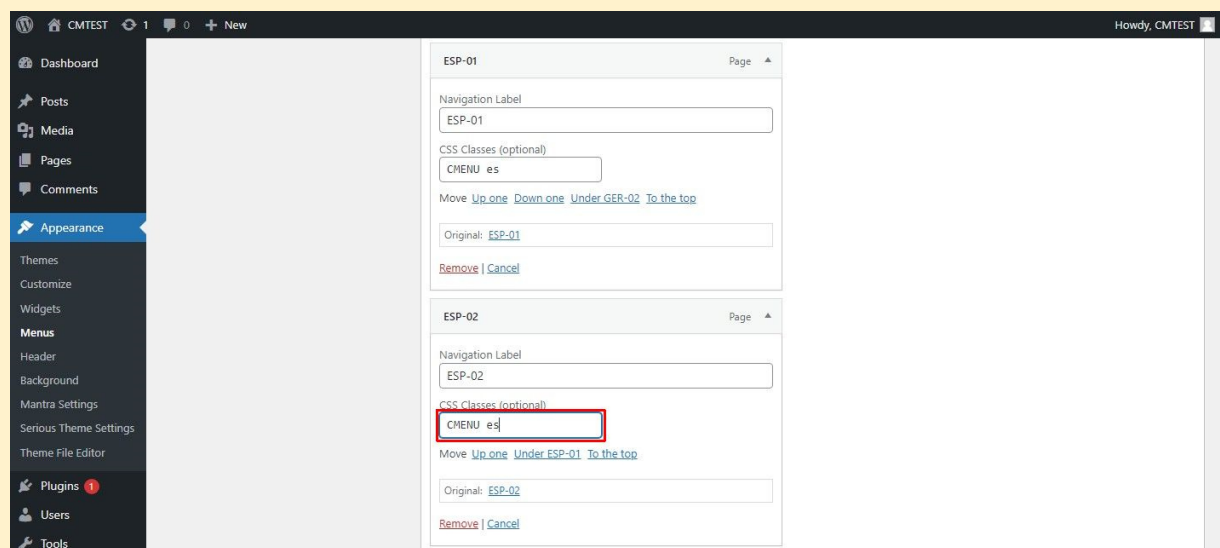

Set the CSS classes in the menu. The 'CMENU' class indicates that the menu item is part of the CMENU display. The language's ISO code determines in which language the menu item should appear.

The screenshot shows the WordPress Admin interface for configuring a menu. The 'Menu structure' section is active, showing a list of menu items. The 'ENG-01' item is selected, and its configuration is displayed. The 'CSS Classes (optional)' field is highlighted with a red box and contains the text 'CMENU gb'. The 'Navigation Label' field contains 'ENG-01'. The 'Original' field contains 'ENG-01'. The 'Remove' and 'Cancel' buttons are visible at the bottom of the configuration panel.

The screenshot shows the WordPress Admin interface for configuring a menu. The 'Menu structure' section is active, showing a list of menu items. The 'GER-01' item is selected, and its configuration is displayed. The 'CSS Classes (optional)' field is highlighted with a red box and contains the text 'CMENU de'. The 'Navigation Label' field contains 'GER-01'. The 'Original' field contains 'GER-01'. The 'Remove' and 'Cancel' buttons are visible at the bottom of the configuration panel.

The screenshot shows the WordPress Admin interface for configuring a menu. The 'Menu structure' section is active, showing a list of menu items. The 'ESP-01' item is selected, and its configuration is displayed. The 'CSS Classes (optional)' field is highlighted with a red box and contains the text 'CMENU es'. The 'Navigation Label' field contains 'ESP-01'. The 'Original' field contains 'ESP-01'. The 'Remove' and 'Cancel' buttons are visible at the bottom of the configuration panel.

Let's save the menu settings.

### Step 8: Grouping Pages

Groups need to be set up so that the selected menu item appears when clicking on the flag, but only in the new language. To do this, pages with identical content need to be grouped together. We can do all this in the 'Groups' menu.

Post ID	Post name	Group
70	pg-eng01	1
69	pg-eng02	2
66	pg-esp01	1
65	pg-esp02	2
68	pg-de01	1
67	pg-de02	2

Step 9: On the finished page, the language selector and the menu items will appear or disappear accordingly.

The trial period is 10 days. The license is automatically added. After the 10 days the CMMenu turns off. If you want to use CMMenu further on, please go to the 'PRO version' and buy license. It is simple and quick. From the localhost domain it is free to use.
